## **AR Game Development Company**

In this modern era of gaming technologies, AR Games have made a positive impact among gamers with their ability to transform everyday environments into interactive playgrounds. With their unique ability to blend virtual elements seamlessly into the real world, AR games have ignited a global phenomenon, captivating players of all demographics. This rising popularity of AR games has fueled the demand for the professional AR game developers.

Recognizing this growing trend, Bitdeal, a leading [game development company](#), offers cutting-edge AR game development services. Before diving deep into the extensive features of Bitdeal's AR gaming solutions, let's have a glance at the basic facts of AR Games.

## **What is an AR Game?**

First off, AR is the short form of Augmented Reality, and Augmented Reality (AR) includes virtual elements in a real-time world. Generally, Augmented Reality (AR) can observe how the real world works and integrate those visual objects into a game. This is the brief definition of an AR Game. Additionally,

an AR Game can incorporate sensors like Global Positioning System (GPS), cameras, microphones, and even audio from the real world.

- Various Deployment Methods

- Marketing and Branding Strategies

## **Our Top-Tier AR Game Development Services**

Take a look at the AR Game Development Services offered by Bitdeal.

1. AR Games from Scratch: This involves designing, creating, and implementing every aspect of the game in a virtual world from the ground up in augmented reality (AR) games.
2. AR Integration Service: Including augmented reality components into already-existing games or applications to improve user interaction and introduce new levels of involvement.
3. Markerless AR Games: Develop AR games that don't use real markers by precisely placing virtual items in the user's surroundings with the help of cutting-edge computer vision and tracking technology.
4. AR Game Art: Creating designs and graphic materials, especially for augmented reality games, fusing digital and real-world components to improve user engagement.
5. Marker-Based AR Games: Creating and creating AR games that use physical markers or triggers to superimpose digital material on the actual environment, providing interactive experiences associated with certain items or sites.

6. End-to-End Game Development: overseeing the complete process of creating a game, from designing and generating ideas to programming, testing, and release, to provide players with an uninterrupted experience.

7. Game Design: Developing the general appearance, tone, gaming mechanics, and gameplay flow to give players an immersive and interesting experience.

8. Location-Based AR Games: Developing AR games that use GPS or location information to link gameplay to actual locales, enticing users to explore and engage with their environment.

## **Different Types of AR Games**

There are several types of AR games available and the following are the types of Augmented Reality games we develop at Bitdeal.

**Adventure Games** - This is one of the famous AR games which is most loved by young people. We can create unique and amazing characters and places to enhance your AR games.

**Action Games** - Everyone loves to play action games, right? That's why we develop AR action games. With Unity and other gaming technologies, we develop the best AR action game.

PvP Games - This type of game is played by multiple people. With this game, players can easily communicate with other players, and opponents and play the game interestingly.

Card Games - This game is played with the configuration of 52 cards. With our AR development services, we can include lively visuals of cards shuffling.

Arcade Games - Many arcade games are played physically. However, by incorporating AR technology, people can play the game with their digital currencies effortlessly.

Educational Games - This type of game is specially developed for educational purposes. For instance, students can play a game about dissecting a brain or kidney.

Casino Games - This game is simply called a table game, too. Just bet on a random number and win a huge reward at the end of the game.

Board Games - This type of game is also luck-related. Board games are often referred to as tabletop or counter games like chess or carrom.

Simulation Games - This game will replicate what's happening in the real world and implement it in Augmented Reality (AR) games.

Racing Games - This type of game is also called a sports game by including race tracks, obstacles, etc with high-level AR technologies.
